

Monthly Dashboard

The monthly dashboard highlights the month's hiring events and dives deeper into why candidates are withdrawing, comparing it to the past month's withdraw reasons. The trends go over how each step of the hiring event is trending over the past 12 months, here is where we discuss the actions we need to take to improve the hiring process.

Hiring App

At hiring events, the talent acquisition team will go through the PowerApps App and check in candidates, input exam scores, interview scores, and other pre-employment steps. This entire process used to be a shared excel sheet so I created an app that automates most of their work. At the end of the event, all data is summarized and analyzed in the event dashboard slide.
